

Create your own decals
A clinic by Frank Schneider
me@frankalan.com
NMRA National Convention
July 8, 2021

You will need –

A laser printer or copier

A laminator

Toner reactive foil

Toner release paper

The last three can be ordered from Decalprofx.com. You can also find toner reactive foil and laminators online thru various sources.

The steps are –

Print your image on toner release paper.

Laminate the toner reactive foil to the image.

Release the toner from the toner release paper in a water bath.

Re-fuse the toner to blank decal stock in your laser printer/copier.

Follow the instructions on the decalprofx web site until you are told to spray with adhesive. Then simply tape the mylar carrier over a piece of blank decal stock and run it back thru your printer/copier.
