

# DIY Decals Artwork & Printing (...including White!)

PCR NMRA CLINIC

APRIL 4, 2018 – ROHNERT PARK

---

**RICHARD BRENNAN**

[rbrennan@tt-west.com](mailto:rbrennan@tt-west.com)

# The Process

---

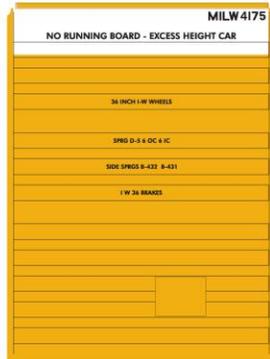

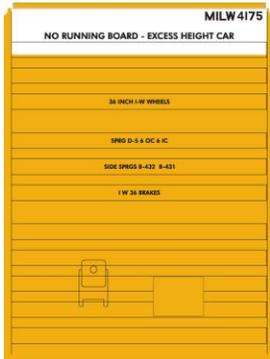

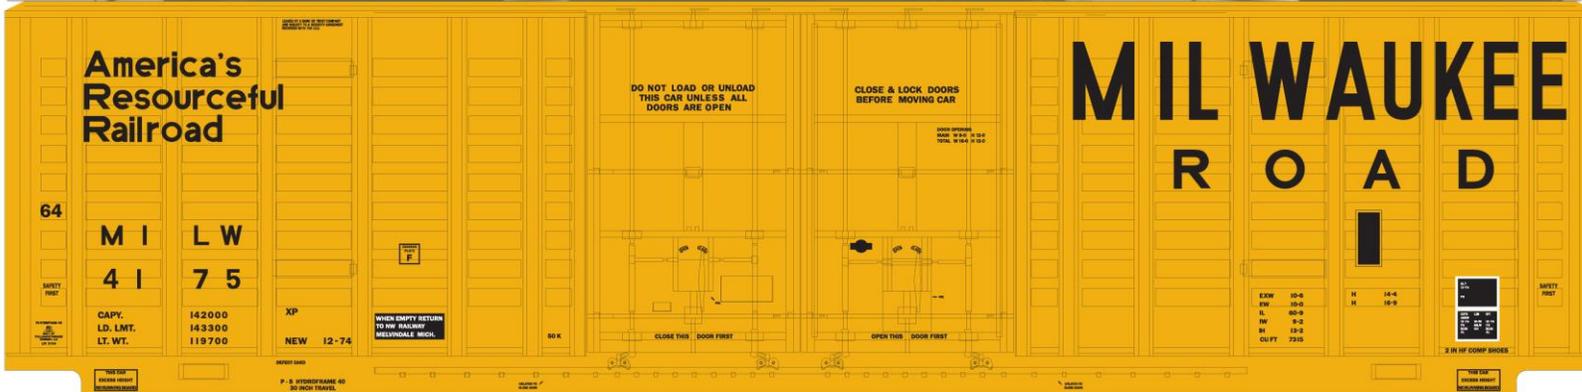

- Identify desired result:  
    Prototype, freelance, renumber, etc
- Prepare Artwork (larger than needed)
- Analyze colors... and potential print order
- Re-size to scale
- Print
- *(as needed)* Overcoat Decal

# Photographs!!!

XP-60ft-DPD Waffle-9  
200% TT-scale

# Typeface vs Stencil vs Font

---

**Typeface:** A set of letters, numbers and symbols that share common design features

**Railroad Stencils:** Letters, numbers and symbols prepared by a draftsman in the Chief Engineer's office; and sent as paper blueprints to each railroad shop (*...where the foreman handed the drawings to an apprentice... and showed him where the tin snips were???*)

**Font:** A size, weight and style of a typeface.

**POST-1984** (computer desktop publishing): A (*usually*) scalable, weight and style of a typeface, conveyed in a digital file.

N.B. Franklin Gothic - 1902, Times New Roman - 1931, Helvetica - 1957, **Arial** - 1982

“...but it’s Railroad Roman!!!”

---

**RAILROAD ROMAN & 0123456789 MQW**

Railroad Roman & 0123456789 MQW

RAILROAD ROMAN & 0123456789 MQW

RAILROAD ROMAN & 0123456789 MQW

**Railroad Roman & 0123456789 MQW**

**Cooper (Railroad) Roman & 0123456789 MQW**

Times New (Railroad) Roman & 0123456789 MQW

# Sources

---

- Railfonts  
Benn Coifmann [www.railfonts.com](http://www.railfonts.com)
- Historical Societies
- TrainSim Sites
- **Google** many commercial sources...  
beware of spammy 'Free Font' sites  
& 'junk' downloads...

*Consider Computer Fonts a 'starting point...'*

# Terminology:

- ☐ Serif
- ☐ sans-Serif (Gothic)
- ☐ Slab Serif
- ☐ Stencil

Serif → **WP**

**SP**

Slab → **YSL**

Stencil  
Bridge → **UTLX** ■

☐ Weights:

Light

Medium

**Bold**

**demi-Bold**

**HEAVY**

Narrow

Condensed

Regular

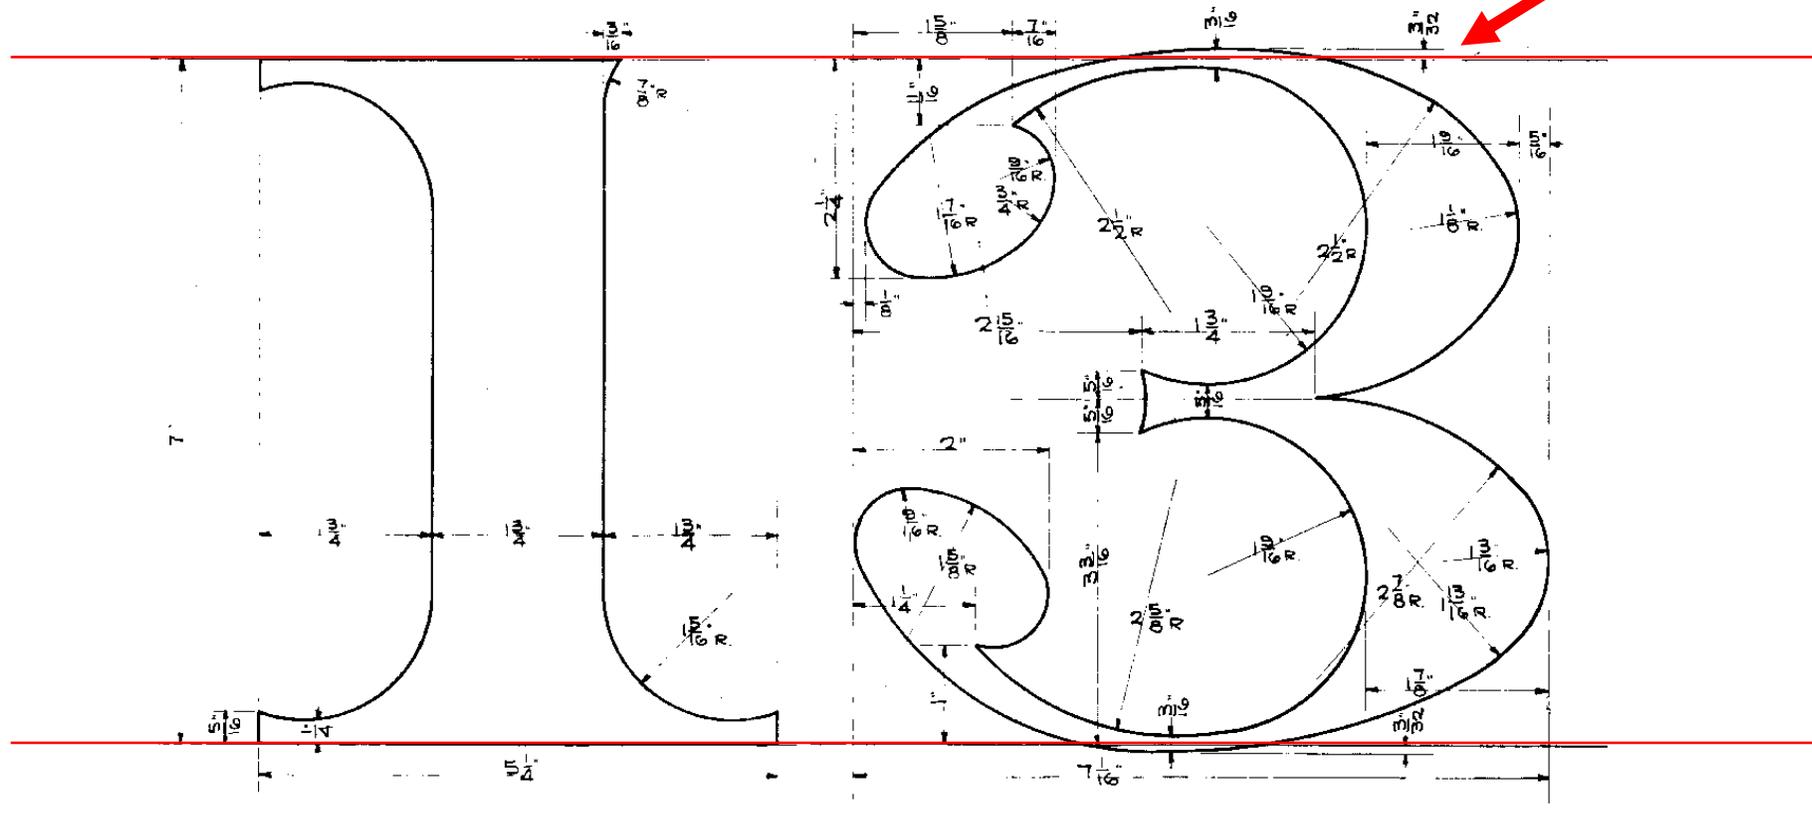

Extended

**BLACK**

# Quiz #1:

***“How tall is a 7-inch letter?”***

# Raster vs Vector

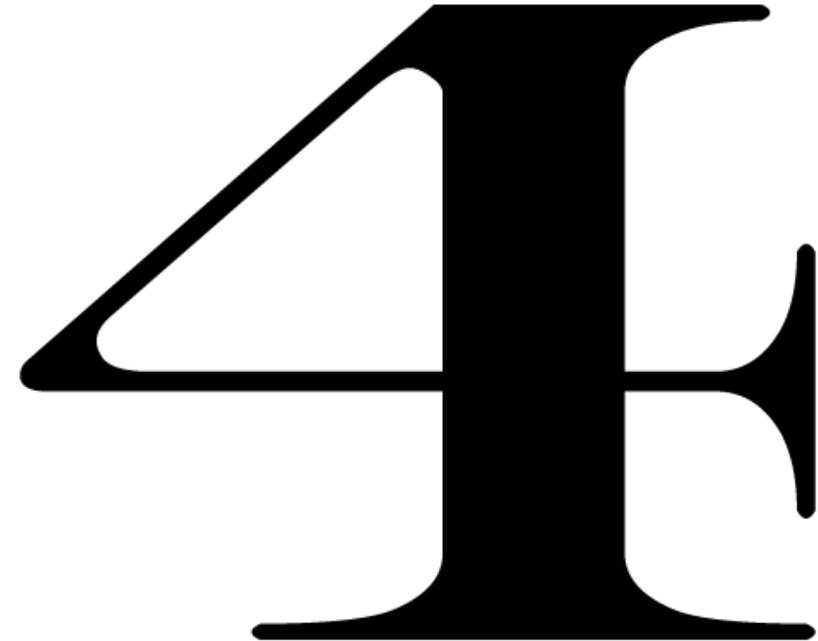

**Pixel by Pixel  
(Raster)**

**Printer: Approximates raster artwork  
at new pixel size (e.g, 600dpi)**

***“The Jaggies...”***

**Mathematically Defined  
Curves (Vectors)**

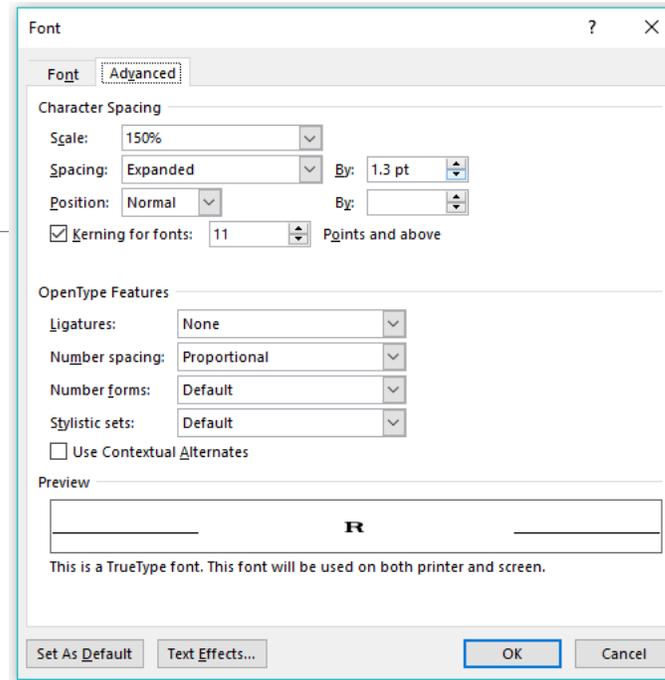

**Printer: Converts to  
Raster in Printing (e.g, 600dpi):**

***Cleanest edges***

# Manipulating Fonts

Office Apps:  
Use the 'Font' tools in Office  
i.e. Word, PowerPoint...

Vector Art Software:

- Convert to outline
- Edit as needed

Font

Outline

# pre-Millennium? ACI labels

## 1) Compute Check Digit

	A	B	C	D	E	F	G	H
1								
2								
3						11		
4	13	Check	3		5646	513.273	5643	3
5	12	Stop						
6	11	ar Nbr	8	512	4096			
7	10		5	256	1280			
8	9		1	128	128			
9	8		0	64	0			

## 2) Build ACR Bars

# Print Technologies

---

- Laser / InkJet

*You own it... but no white*

- ALPS

*used... \$100 - \$900*

- White Laser

*Europe... - White Toner: < \$200*

- UV-LED

*If you have to ask...*

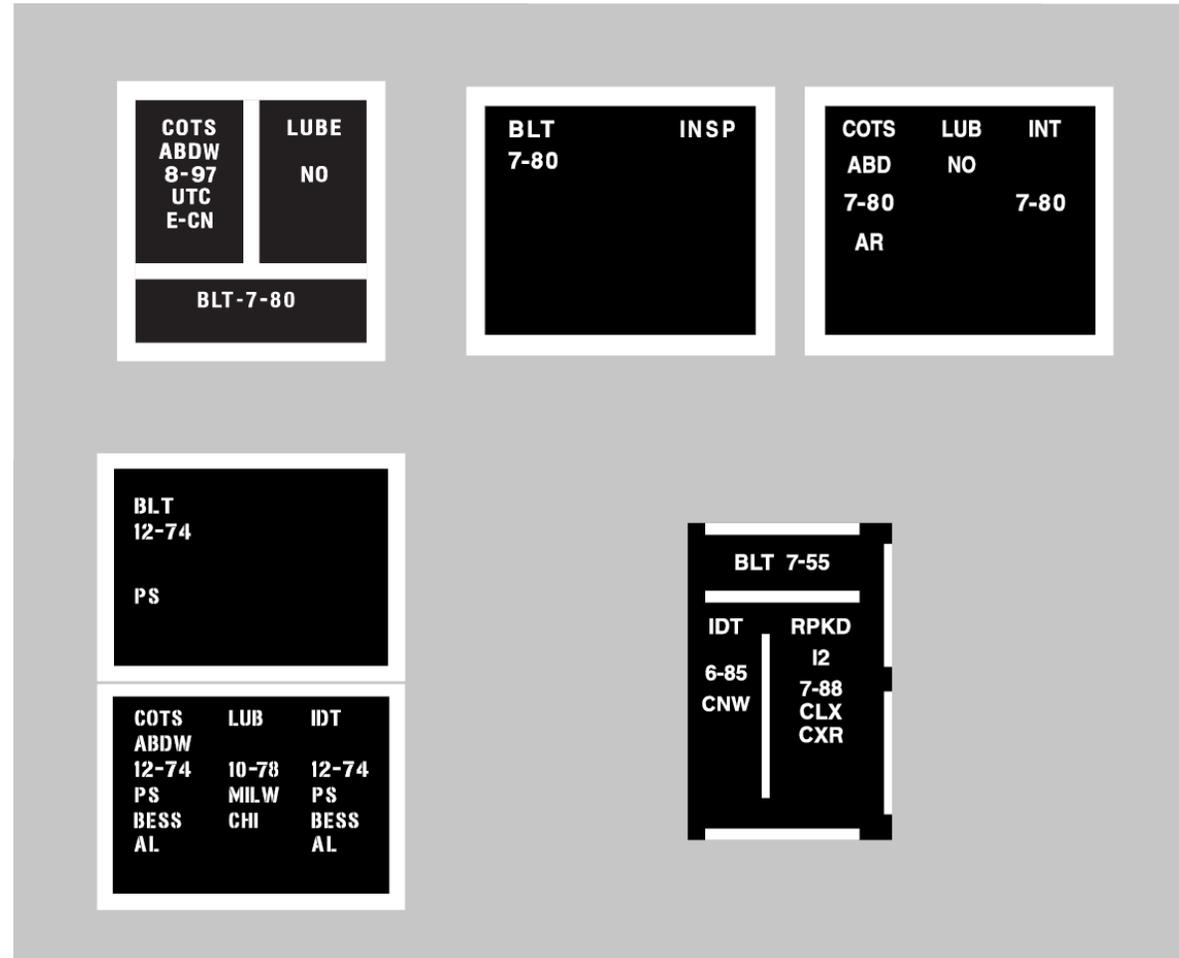

# COTS

*No white toner?*

Print **BLACK...**  
On White Decal Paper

...trim around white  
COTS margins

# Decal Paper

---

I use:

- TangoPapa  
Paul Prestia - [www.tangopapadecals.com](http://www.tangopapadecals.com)

Others...

- Micro-Mark - <https://www.micromark.com/hobby-supplies/decals>
- Testors - [www.testors.com](http://www.testors.com)
- BEL - [www.DecalPaper.com](http://www.DecalPaper.com)

***NOTE:*** Use correct paper for your printer: InkJet or Laser !!!

# Inkjet / Laser

---

## Inkjet:

“Spits” tiny drops of CMYK ink at the paper...

Must use specially coated (semi-absorbant) media - ‘Inkjet paper’

Desktop printer typically 300dpi... sometimes 600dpi.

To prevent smearing... overcoat with **Krylon** spray or ‘**Future**’

No white - Colors assume white background

## Laser:

Thermally bonds static-charged CMYK powder to media...

Technology shared with many copy machines: ‘Laser/Copy Paper’

Typically 300~600dpi... commercial printers higher

Some can also print on thin styrene

Usually no white - Colors assume white background

# ALPS

---

## ALPS Micro-Dry

Thermally transfers colors from ribbons to media

Capable of printing CMYK plus White, Metallic, etc...

Unique ability to retract paper and print multiple layers while maintaining alignment

Late 1990's technology... Win XP (*no native Win 10 drivers*)

PC requires Parallel port or bi-directional Parallel-USB

MAC requires SCSI

Manufacture and support discontinued by ALPS

Ribbon cartridges becoming scarce and expensive...

# White Laser

---

## Ghost-White Laser

*Ghost*

Long-awaited white laser cartridges for some HP and other standard laser printers; Replaces Black (K) cartridge

[www.ghost-white-toner.com](http://www.ghost-white-toner.com)

Single layer printing... less opaque than double layers  
Typical Cost: \$150 (+ EU shipping) for <1500 sheets

Black artwork prints as White...

# UV-LED

---

## UV-LED

*Think of a 3D color printer... working in 2d!*

*UV-LED is an InkJet technology...*

*but uses instant UV light curing of resin ink*

*Can print and cure white... then overprint a 2<sup>nd</sup> color.*

*Commercial Quality... prints on plastic, metal, glass*

### **Limitations:**

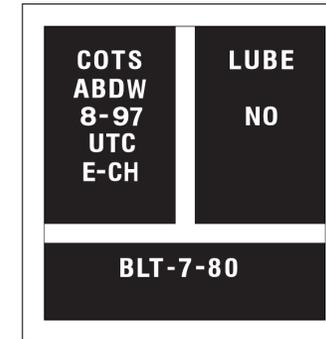

- 8ft by 10ft print size - 2in thick
- 16 ink colors
- 1200dpi

# Color Sequence

Is the White on top of the Black...?

Or is the Black on top of the White...?

- ALPS can do multiple color passes and maintain registration...
- UV-LED can do 2<sup>nd</sup> color over White...

# Color Models

---

- ❑ **RGB – Additive:** Used for electronic displays  
Red – Green – Blue (white = all, black = none)
- ❑ **CMYK – Subtractive:** Used for print  
Cyan-Magenta-Yellow- Black (white usually = none)
  
- ❑ **Pantone** – Color Matching System
- ❑ **RAL** – EU colour matching system
- ❑ **Munsell** – hue, value (lightness), and chroma (color purity)
- ❑ **Federal Standard 595C**– now Aerospace Material Specification Standard 595

# Quiz #2:

## CMYK “What Color is **Black**?”

Cyan

Magenta

Yellow

black

**Black:**

**C=0**

**M=0**

**Y=0**

**K=100**

*uses toner from Black cartridge ONLY...*

**Rich Black\*:** **C=100 M=100 Y=100 K=100**

*uses maximum toner from all 4 cartridges*

*\*use with caution - RTFN...*

# Overspray

## Overspray needed

- on InkJet decals to prevent smearing
- on ALPS decals to prevent scratching

### ❑ Clear Acrylic

- ❑ Formerly 'Future' (Floor Finish)

### ❑ Krylon

- ❑ Crystal Clear Gloss

# DIY or Printing Service

---

“Buy or Lease...”

- Doing non-white decals is (relatively) easy and inexpensive...  
*(remember... you can use white decal paper...)*
  
- Printing White requires investment;  
How many will you print? *(over the life of your current printer)*
  - Substantial number of different decals (a few of each) : Consider **DIY**
  - Large number of a single road-name or style: Consider **Print Service** (ALPS or Screen)
  - Newer commercial choice is UV-LED

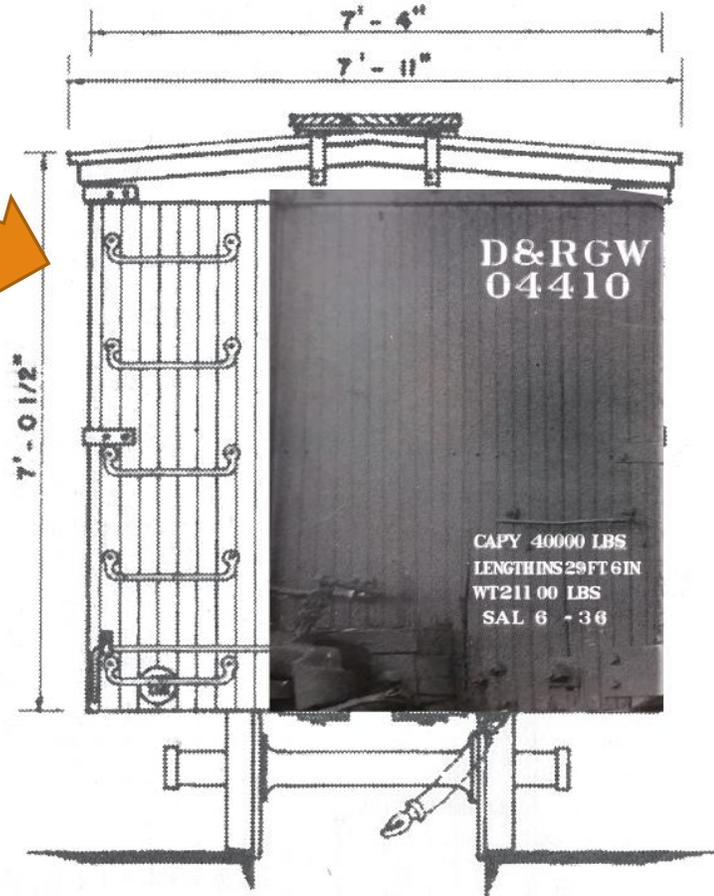

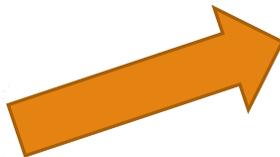

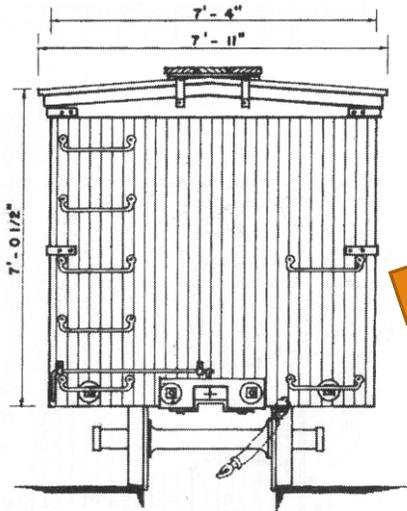

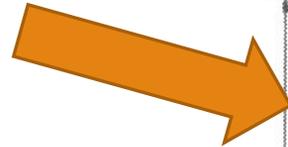

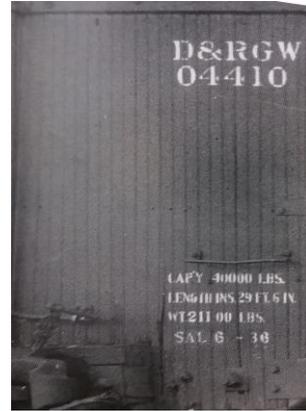

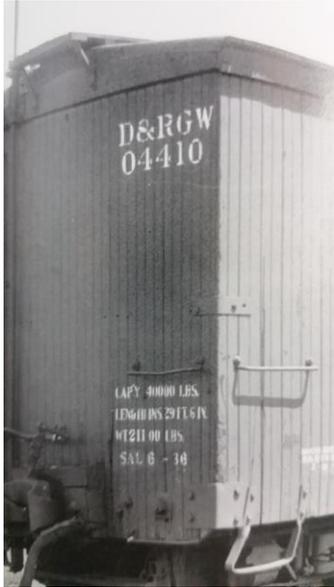

# Production...

---

- Un-skew (straighten) prototype photo
- Resize horizontal and vertical proportions
- Type over with 'similar' font lettering
- Convert lettering to 'outlines'
- Adjust EACH letter is needed...
- Check final artwork against know diagram or measurements
- Create print file in the format you need (colors / layers)
- PRINT!!!!

# D&RGW MoW
